PinPointer™

PinPointer™ Diagnostics Suite

It Takes the Trouble Out of Troubleshooting

Diagnosing errors from the field? That's way too much trouble, Now, for the first time, you can save manpower, equipment, and money by diagnosing from the convenience of your office. The PinPointer™ Diagnostics Suite provides centralized logging for

SCADA/DCS/PLC Control System network events. By evaluating across the entire data stream, this suite gives you a complete set of tools to identify, diagnose and locate from your control center, not the field.

PinPointer™ Diagnostics Suite

It Takes the Trouble Out of Troubleshooting

Features and Benefits

- Centralized logging of all Control System network activity
- Searchable event log gives detailed status for all links, including operational status, security violations, communications error events, and all other system events
- Real-time data monitoring of all communications links throughout the Odyssey™ implementation
- Line Status screen shows current operational status of all links with green, yellow, and red status indicators
- Advanced diagnostic tools for intelligent data analysis
 - Captures all data passing through a port onto a database on the Host
 - Data Captures are conveniently activated on the Host without additional cabling or disrupting data flow
 - Data Captures can be of unlimited length
 - Data Capture browsing tool in GUI displays all data and timing information whether in encrypted, compressed, or transparent modes

Odyssey™ Product Suite Benefits

- Configurable and upgradable from the Odyssey™ Host System
- Better overall decision-making through intelligent, real-time data analysis
- Capable of seamlessly integrating new network equipment into overall system monitoring
- Platform-independent software solution
- Upgradable across an entire Odyssey™ Product Series implementation from a single Host computer
- Scalable solution so that you can continue to expand your network and add new equipment or applications
- Configurable to meet the exact needs of your specific Control System network
- Easily integrated into your existing Control System network – no costly upgrades

Through the intuitive web-based interface screens in the Host system, you can quickly and easily pinpoint system anomalies through advanced troubleshooting and diagnostic features.
