SCADAsafe™ / Modem Defender™ Security Suite

Because Security isn't an Issue – It's THE Issue

Nobody takes this issue more seriously than Aegis. That's why we've developed the first-ever comprehensive security package. The SCADAsafe™ / Modem Defender™ Security Suite has you covered from control room to field, with 2048 bit encryption

and remote telephone access defense. This electronic perimeter security, with device/user authentication and validation as well as encryption for SCADA/DCS/PLC communications, will ensure that any outside intruders will be barking up the wrong tree.

SCADA Safe™ / Modem Defender™ Security Suite

Because Security isn't an Issue – It's THE Issue

Features and Benefits

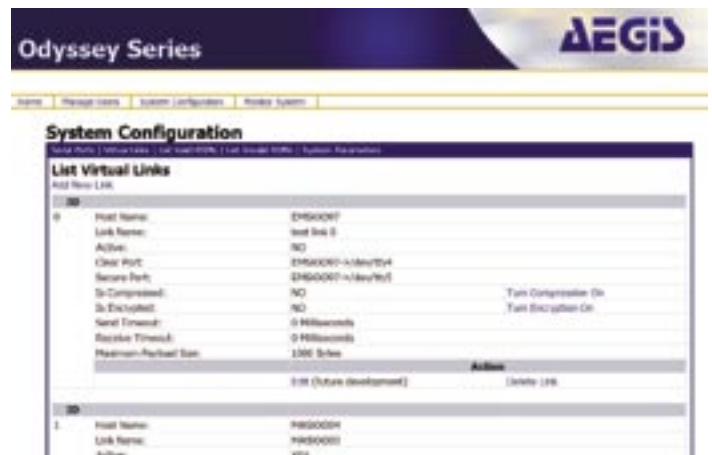

- Robust, ultra-low latency 2048-bit encryption technology
- Encryption can be turned on and off from the Host on an individual link basis – and can be refreshed if a breach is suspected
- Modem Defender™ component protects vulnerable land lines at remote locations
- Remote device and user authentication and authorization
- Easy to implement and integrate into your existing network
- Security that meets or exceeds proposed standards
- Cypher feedback encryption technology prevents replay attacks
- Advanced active monitoring of all communication links reports any suspicious network activity

The SCADA safe™/Modem Defender™ Security Suite provides the first ever electronic security perimeter with device/user authentication and authorization, as well as robust encryption for SCADA/DCS/PLC Control System network equipment and data.

Odyssey™ Product Suite Benefits

- Better overall decision-making through intelligent, real-time data analysis
- Capable of seamlessly integrating new network equipment into overall system monitoring
- Platform-independent software solution
- Upgradable across an entire Odyssey™ Product Series implementation from a single Host computer
- Scalable solution so that you can continue to expand your network and add new equipment or applications
- Configurable to meet the exact needs of your specific Control System network
- Easily integrated into your existing Control System network – no costly upgrades

Through the intuitive web-based interface screens in the Host system, you can quickly and easily review access and monitor the security integrity of your control system communications.
