

Odyssey™ Host System

The Best Supervisor You've Ever Had

What is the Odyssey™ Host System?

Flexible, redundant and compatible with your IT standards, the Odyssey Host™ System provides complete management of system parameters, data and hardware. This system provides control room monitoring of the network and troubleshooting data for engineering.

How it Works

The Odyssey™ Host System is a platform-independent software solution that sits between your front end host and control system network. Through its connection to Remote Service Modules™ and Remote Modem Defenders™, the Host System effectively controls compression, encryption and device/user authentication and authorization. Manipulation of the Host System is provided through intuitive, web-based screens. Not only can you modify system parameters, configure user permissions and monitor all communication links, but through a single Host you can also configure your entire Odyssey™ Product Series implementation.

Features/Benefits

- All Bit protocols
- All Byte protocols
- Converts Bit/Byte in either direction
- Multiple Failover and Disaster Recovery Options
- Centralized Management System allows complete configuration of user permissions and network settings.
- Automatic Device Discovery for easy scalability
- Key Management System for device authentication and verification
- The ability to turn encryption/compression on and off for individual system components
- Complete System Monitoring tool set including searchable, filterable logging and data capturing for individual components
- Completely configurable to meet your individual requirements or network
- Easily integrated into your existing architecture – no need for costly network upgrades
- It pushes upgrades out to all of the RSM and RMD units, no need to go into the field to upgrade the software, saving you time and money

Part of a Comprehensive Solution

The Odyssey™ Host System is one of three implementation components that comprise the Odyssey™ Product Series. The Host provides complete control and configuration of all Odyssey™ features through intuitive web-based screens.

Odyssey™ Host System

The Best Supervisor You've Ever Had

Odyssey™ Host System Specifications

- Compatible with IBM AIX, HP-UX, Linux, Solaris and Windows operating systems
- Interfaces with Internet Explorer and Mozilla Firefox Web Browsers
- Meets or exceeds expected NERC CIP 002-009 Cyber Security Standards

The Odyssey™ Product Series is “retrofitted” to your existing architecture. It integrates virtually transparently, providing valuable performance, troubleshooting, and security benefits without interrupting or adversely affecting existing network traffic.
